

## Security Application:

### The Problem:

You are about to head away on holidays and your house will be empty whilst you are gone. You would like a complete security system installed before you go, and require the following:

- A system that can cover all the major entrances and windows, as well as detect motion within the house.
- You want to know if the alarm has been activated whilst your away so you can alert friends or family to check on your home.
- A system that is DIY and expandable.
- A system that deters break-ins as well as reports them.

You are renting your home so hard wiring is not an option, but that would be too time consuming and expensive anyway, so what do you do?

### The Solution:

Winplus Home Automation security products have got you covered. By purchasing and installing the following products, you will have a comprehensive security system protecting your home when you are not there.

**Security Starter Kit** – Everything you need to get started with Winplus Home Automation security. Packed with features the Security Starter Kit includes:

- Wireless door/window sensor
- Wireless motion sensor
- Smart console with battery backup
- RF remote control arming and disarming.
- Audible and silent alarm
- Auto dialer function that can dial 4 preset numbers when alarm is activated.
- Integration with Winplus Home automation products for control of lights, appliances and devices.
- Automation security function, program lights to turn on randomly whilst you are away to give your home a lived in look.

**Security Motion Sensor** – Expand your security system by adding more wireless motion sensors. Detect movement up to 12 meters away with a 90 degree field of view. Sensors install in seconds and are tamper proof, two way communication allows sensors to report back to the security console if batteries are low.

**Security Door Sensor** – Expand you security system by adding extra wireless door/window sensors. Attach to any door or window you wish to monitor. Sensors install in seconds and are tamper proof, two way communication allows sensors to report back to the security console if batteries are low.

**Socket Module** – Integrate lighting automation into your security system. Connect a socket module to any bayonet or screw fitting, such as your front porch or entry light. Set the console in the security starter kit to randomly turn on and off lights connected to socket modules whilst you are away to give your home a 'lived in' look.

**Lamp Module** – Add lamps or plug in lights into your automation and security system. Module installs in seconds and can be used in conjunction with the security kit console to turn on and off lamps/lights at random, making your home looked 'lived in' when you are away.

**Security Application:**

**Winplus Home Automation security costs:**

Security Starter Kit	\$399.00
Security Motion Sensor	\$99.00
Security Door Sensor	\$69.00
Socket Module	\$34.99
Lamp Module	\$69.00
